

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An information processing apparatus, comprising:

an acquisition means for acquiring information on a radio broadcast station and information on an audio quiz question presented by said radio broadcast station;

a generation means for generating radio broadcast station identification information and generating content identification information for identifying the audio quiz question on the basis of said information acquired by said acquisition means, wherein the generated radio broadcast station identification information and content identification information are different from the acquired information on a radio broadcast station and information on an audio quiz question;

a storage means for storing said radio broadcast station identification information and said content identification information by associating said radio broadcast station identification information with said content identification information;

a transmission means for transmitting information stored in said storage means to a second information processing apparatus in response to a request made by said second information processing apparatus through a network.

2-3. (Canceled)

4. (Currently Amended) An information processing apparatus, comprising:

an acquisition means for acquiring information on a radio broadcast station and information on an audio quiz question presented by said radio broadcast station;

a generation means for generating radio broadcast station identification information and generating content identification information for identifying the audio quiz question on

the basis of said information acquired by said acquisition means, wherein the generated radio broadcast station identification information and content identification information are different from the acquired information on a radio broadcast station and information on an audio quiz question;

a storage means for storing said radio broadcast station identification information and said content identification information by associating said radio broadcast station identification information with said content identification information;

a transmission means for transmitting information stored in said storage means to a second information processing apparatus in response to a request made by said second information processing apparatus through a network

wherein said acquisition means further acquires a validity-condition concerning validity of presentation of said audio quiz question from said radio broadcast station; and

said storage means further stores said validity-condition by associating said validity-condition with said radio broadcast station identification information and said content identification information.

5. (Previously Presented) An information processing apparatus according to claim 4, wherein said validity-condition includes information on additional information added by a user receiving data including said radio broadcast station identification information and said audio quiz question identification information.

6-29. (Canceled)

30. (Previously Presented) The information processing apparatus of Claim 4, wherein

said validity-condition is a deadline for accepting a response.

31. (Previously Presented) The information processing apparatus of Claim 4, wherein said validity condition is an age restriction.

32. (Previously Presented) The information processing apparatus of Claim 4, wherein said validity-condition is an adult category.

33. (Previously Presented) The information processing apparatus of Claim 4, wherein said validity condition is a registered person.

34. (Previously Presented) The information processing apparatus of Claim 4, wherein said validity condition is an area restriction.
